; Sequence 1, Application US/09239938 ; Patent No. 6329510

GENERAL INFORMATION:

APPLICANT: Qin, Shixin

APPLICANT: Qin, Shixin

APPLICANT: Newman, Walter

APPLICANT: Newman, Masim

APPLICANT: Leukosite, Inc.

TITLE OF INVENTION: ANTI-CCR1 ANTIBODIES AND METHODS OF USE

TITLE OF INVENTION: THEREFOR

TITLE OF INVENTION: THEREFOR

TITLE OF INVENTION: THEREFOR

TITLE OF INVENTOR OF 13

CURRENT FILICATION NUMBER: US/09/239,938

CURRENT FILICATION NUMBER: 1999-01-29

NUMBER OF SEQ ID NOS: 1

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 1

LENGTH: 355

, ORGANISM: Homo sapien US-09-239-938-1

TILLE OF INVENTION: Polymucleotides Encoding Human G-Protein Chemokine Receptor (CCR5)

TILLE OF INVENTION: HDGNRIO

FILE REFERENCE: 1488.1150006

CURRENT APPLICATION NUMBER: US/09/502,783A

CURRENT PILING DATE: 2001-08-23

PRIOR APPLICATION NUMBER: 08/466,343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: SANSON, MICHEL

Manuscarinic acetylcholine receptor, cardiac - pig

Miscarinic acetylcholine receptor, cardiac - pig

MyAlternate names: muscarinic acetylcholine receptor M2

C;Species: Sus scrofa domestica (domestic pig)

C;Species: L5-Dec-1988 #sequence_revision 15-Dec-1988 #text_change 31-Dec-2000

C;Accession: A27386; A25656

R;Peralta, E.G.; Winslow, J.W.; Peterson, G.L.; Smith, D.H.; Ashkenazi, A.; Ramachandran Soience 236, 600-605, 1987

A;Title: Primary structure and biochemical properties of an M-2 muscarinic receptor.

A;Reference number: A27386; MUD:87206169; PMID:3107123

A;Accession: A27386

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Muscarinic acetylcholine receptor M2, glandular - pig
M.Alternate names: muscarinic acetylcholine receptor III
C.Species: Sus exrofa domestic pig)
C.Species: Sus exrofa domestic pig)
C.Species: Sus exrofa domestic pig)
C.Species: Sus exrofa domestic of domestic pig)
R.Accession: SO114

"Sequence evolution of the CCR5 chemokine receptor gene in primates.";

Mol. Balol. Bvol. 16:1145-1154 (1999).

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transduces a signal by

increasing the intracellular calcium ions level. May play a role

in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

Sequence evolution of the CCRS chemokine receptor gene in primates.";

Mol. Biol. Evol. 16:1145-1154(1999).

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transduces a signal by

increasing the intracellular calcium ions level. May play a role

in the control of granulocytic lineage proliferation or

differentiation. 15-MAR-2004 (Rel. 43, Created)
15-MAR-2004 (Rel. 43, Last sequence update)
15-MAR-2004 (Rel. 43, Last and cation update)
C-C chemokine receptor type 5 (C-C CKR-5) (CC-CKR-5) (CCR-5) -1- SUBCELLUIAR LOCATION: Integral membrane protein. -1- SIMILARITY: Belongs to family 1 of G-protein coupled receptors. Hylobaras moloch (Silvery gibbon).

Hylobarata; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Mammalia; Eutheria; Primates; Catarrhini; Hylobatidae; Hylobates.

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium fons level. May play a role
in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Proc. Natl. Acad. Sci. U.S.A. 94:4005-4010(1997)
- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or SPECIES=M.mulatta; MEDLINE=21354176; PubMed=11461684; Margulies B.J., Hauer D.A., Clements J.E.; "Identification and comparison of eleven rhesus macaque chemokine AIDS Res. Hum. Retroviruses 17:981-986 (2001) SEQUENCE FROM N.A. receptors." 

differentiation. SUBCELLULAR LOCATION: Integral membrane protein. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

MOD. Biol. Evol. 16:1145-1154(1999).
-I- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

Mol. Biol. Evol. 16:1145-1154(1999).
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                       CCRS OR CMKBRS.

"Sequence evolution of the CCR5 chemokine receptor gene in primates.";
Mol. Biol. Zvol. 16:1145-1154(1999)
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RAWIES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.
                                                                                                                                                                                                                                                                                                                                                             Trachypithecus phayrei (Phayre's leaf monkey).

Guo B., Kuno K., Harada A., Matsushima K.;
Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.
-!- Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RAYTES and subsequently transduces a signal by
increasing the intracellular calcium ions level.
-!- SUBCELULIAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Detected in monocyte/macrophage cell lines,
but not in nonhematopoietic cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chemoattractant protein 1) and murine macrophage inflammatory protein laipha receptors: evidence for two closely linked C-C chemokine receptors on chromosome 9.";

             -!- FUNCTION: Receptor for the MCP-1, MCP-3 and MCP-4 chemokines.

Transduces a signal by increasing the intracellular calcium ions level. Alternative coreceptor with CD4 for HIV-1 infection.
-!- SUBSCELULAR LOGATION: Integral membrane protein.
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                              PTM: N-glycosylated. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CYTOPLASMIC (POTENTIAL).
